RE: Domestic water service to your property

Dear Mr. Reisinger:

As you know, we have been working for several years to provide your property with a clean domestic water supply so that you did not use untreated water from your well. Your residential well has been tested under the direction of the Washington Department of Ecology since 2002 and low concentrations of chemicals called Volatile Organic Compounds or VOCs have been detected in the well. The Department of Ecology, in conjunction with the Benton-Franklin Health District, decided several years ago that the appropriate solution is to provide impacted properties in the east Pasco area with drinking water from the City of Pasco.

To accommodate your request to not hook up to city water, we first provided you with bottled water at no cost and then installed an on site carbon-filter system on your residential well, also at no cost. Unfortunately, while the treatment system is removing the VOCs, it is causing a VOC by-product, vinyl chloride, to be present in your tap water. Accordingly, we will be disconnecting the treatment system as soon as possible and will provide you with bottled water until we can hook your property up to city water.

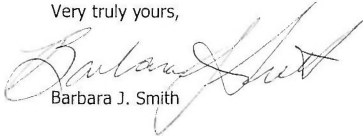

The Pasco Landfill Potentially Liable Parties (PLPs) want to again renew our offer to connect your residence to the City of Pasco municipal water system at no cost to you. This would include:

- Installing a water meter and necessary service line to your property;
- Connecting your domestic water system to the city water system;
- Paying for water service until such time as your well becomes available for domestic purposes;
- Disconnecting the domestic water system from its current well water supply; and,
- Installing a backflow prevention device.

In exchange for our completing the above activities, we will ask that you continue to provide our contractors with access to your property so that both your wells can continue to be tested and drinking water supplied to you as described above.

The Pasco Landfill PLPs have and will continue to work the Department of Ecology and the Benton Franklin Health District to ensure that the quality of your drinking water does not present any potential health risks to you, your family and anyone else on your property. If you have any questions or concerns, please contact me (Barbara Smith) at (206) 343-0250 (you may call collect).

Very truly yours,

Barbara J. Smith
